

# Complete EFB Data Solution

Visit **bytron.aero**

Seamless operations with EFB, Dispatch & instant Reports

# Integrated Data Process

# Ground Portal

The Ground Portal is an integrated flight data management solution that includes essential tools for flight operations.

- Flight Dispatch • Sector Briefing • Reporting & Analytics
- NOTAM Watch • Airfield Watch • Admin Customisation

# EFB Application

Our EFB solution connects seamlessly with the Ground Portal to streamline pilot workflows and improve data capture.

- Digital Briefing • Journey Log • Form Builder
- Document Library • Tools

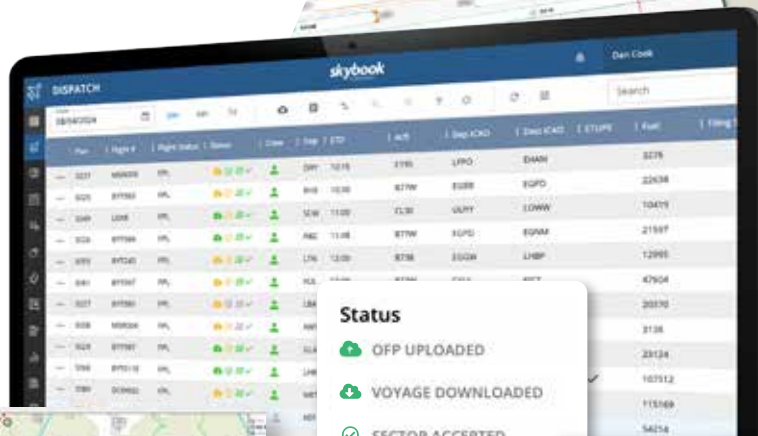

*"The highly configurable solution provides a useful tool for our pilots, as well as for our Flight Operations and Network Control teams"* Paul Smylie, Senior Manager, flydubai

# Flight Dispatch

**Centralise all your flight data with an integrated dispatch solution.**

- World-class briefings and flight release, automated or managed (can integrate with 3rd party EFFs)
- Review flight plans, Wx, NOTAMs, charts and all briefing information
- Monitor flights & potential delays & receive alerts
- Retain non-departed flights for up to 7 days
- Real-time pilot status updates
- Send last minute updates to the crew
- Attach notices & files to briefing packs such as NOTOC or loadsheets

*Over 12 million briefing packs are generated and sent to flight crew each year.*

| Flight # | Status | Flight Status |
|----------|--------|---------------|
| BYT983   | 🟢🟡🟢✅   | ARR           |
| MSR0GZ   | 🟡🟡🟡✅   | Dep           |
| BYT987   | 🟢🟡🟢✅   | FPL           |
| BYT985   | 🟢🟡🟢✅   | ARR           |
| DRD001   | 🟡🟡🟡✅   | CNL           |

# Admin Customisation

**Take control and make changes independently without needing backup support.**

- Rename or hide fields that aren't relevant
- Configure dropdown menu's, pop-ups & acceptance notifications
- Update distribution lists of comments & photos
- Add fuel discrepancy reasons & new delay codes

▼ ATIS / ATC

▼ Fuel Uplift

|                     |                                                                                                       |                                             |

| Density             | <input type="text" value="Custom Label"/><br><input type="text" value="Specific Gravity"/>            | Hidden: <input type="checkbox"/>            |

The screenshot shows the Skybook software interface with the 'SETTINGS' menu open. The 'ROUTE' tab is selected, displaying various configuration options for route planning. The 'Display Mark Range Maps (in Minutes) for the following Airports:' section shows a table with columns for 'Name', 'ID', 'X', 'Y', 'Z', and 'R'. The 'Range Ring Options' section includes checkboxes for 'Range Ring Line Width', 'Range Ring Line Color', 'ETOP Line Width', 'ETOP Line Color', and 'ETOP Range Ring Label'. The 'Route Plot Generation Options' section includes checkboxes for 'Use 100 Knots Plot', 'Use 100 Miles Plot', 'Use 100 Miles Plot', 'Use Wind & Temp', and 'Generate Ruggedness Chart'.

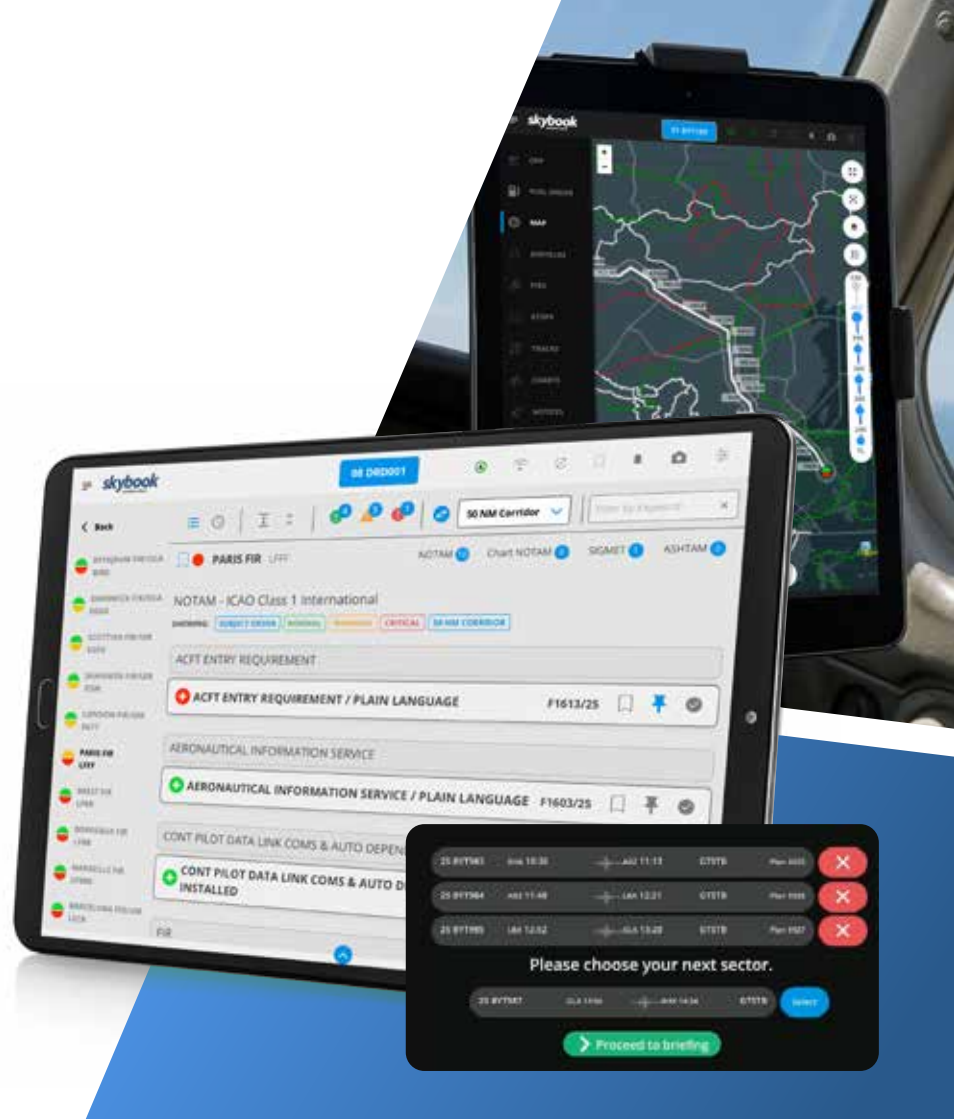

# EFB Briefing

## Enhanced awareness with EFB briefing.

- METAR, TAF, Wx Charts, Route Map & ETOPs
- NOTAM filtering by severity, keyword, NM Corridor - Pin, mark as read & bookmark
- Multiple sector briefings saving time & fuel saving decisions for quick turn-arounds
- Send Fuel orders to dispatch or supplier
- RAIM outage reports
- Notices, attachments & bookmarks
- Summary section with quick links to favourite parts of the app

*"Bytron demonstrate exceptional flexibility & commitment to continuous improvement."*

EFB Specialist, SunExpress

# EFB Journey Log

**Streamlined flight phase,  
tailored to your requirements.**

- Customisable sections via Admin
- Loadsheet upload, compare and distribute
- ATIS & ATC clearance bespoke keyboard
- Integrated crew data & add custom crew
- Integrated with FD Pro, mPilot, Charts+
- Auto delays & search code functionality
- Fuel data, auto calculations & customisation
- Security search & NOTOC
- Landing performance
- Ground services checklist, incident reports
- Device sync & real-time nav log
- Offline sign-off & field prompt checklist

# Weight & Balance

**Precise calculations with enhanced safety parameters.**

- Auto designated aircraft profiles with BOW synced directly from the W&B configuration
- Input of load & fuel data within the CG envelope
- Auto populated ZFW, TOW, LOW based on data input and shown on CG envelope
- Loadsheet only available if the aircraft CG is within the safety limit
- Sign loadsheet & send to the ground, creating a seamless digital record
- Calculate LMC within weight limits

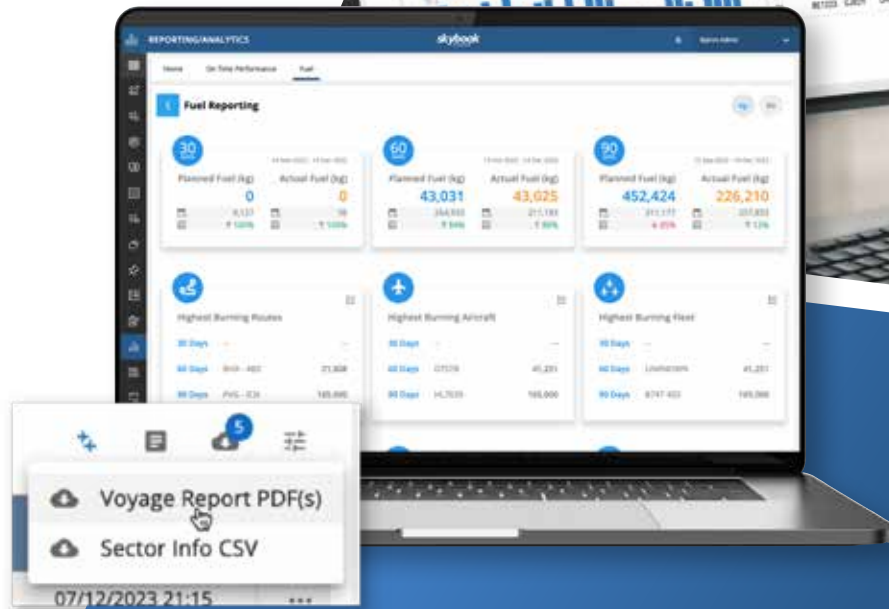

# Reporting & Analytics

**Accurate reports & analytics  
instantly transmitted from the EFB.**

- OTP analysis of aircraft, airports, delays, fleet, route & carrier code
- Delay code analysis
- Fuel comparisons Planned route vs actual
- Flight summary with audit trails of crew, times & delays
- Download voyage reports, flight plans & files
- Journey log reports automated to emails
- Data collection: fuel, loadsheet, APU, landing performance, CAT approach, ATIS, Clearance, waypoints, ground services, de-icing
- Lock data during an investigation
- Admin can edit signed-off times, delays, fuel & nav log entries with audit trail

# Airfield Watch

**Instant awareness of changing weather conditions & critical NOTAMs.**

- Colour coded graphics for weather & NOTAMs
- Airfields automatically added from flight plans
- Wx status changes based on your chosen minima
- Multiple airport minima for Alternate, En-route Alternate and ETOPS Alternate
- Category A, B and C Airports

*"Attracts attention to troublesome areas when our team is busy with daily operational tasks and assists with getting a quick overview of situation at the beginning of their shifts."*

Domas Makarevičius, Flight Planning Manager - GetJet Airlines

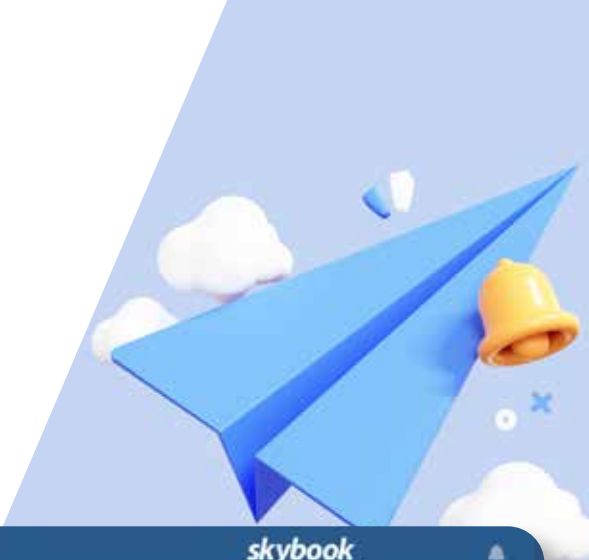

# NOTAM Watch

**Ensure the right people receive filtered critical & warning NOTAMs, improving safety awareness.**

- Automatically filters irrelevant NOTAMs
- Filter by Q-Code, Series, Airfield, FIR, QFIR, Keyword
- Designate NOTAM alerts to specific people or teams
- Time-based NOTAM filtering options for specific time windows relative to ETD/ETA in briefing packs

***“Following an eruption of a volcano in Italy which closed our destination, luckily with NOTAM watch we were the first to know and called the flight back hence reducing disruption over all the fleet.”***

Ahmed Hassan, Manager  
Nesma Airlines

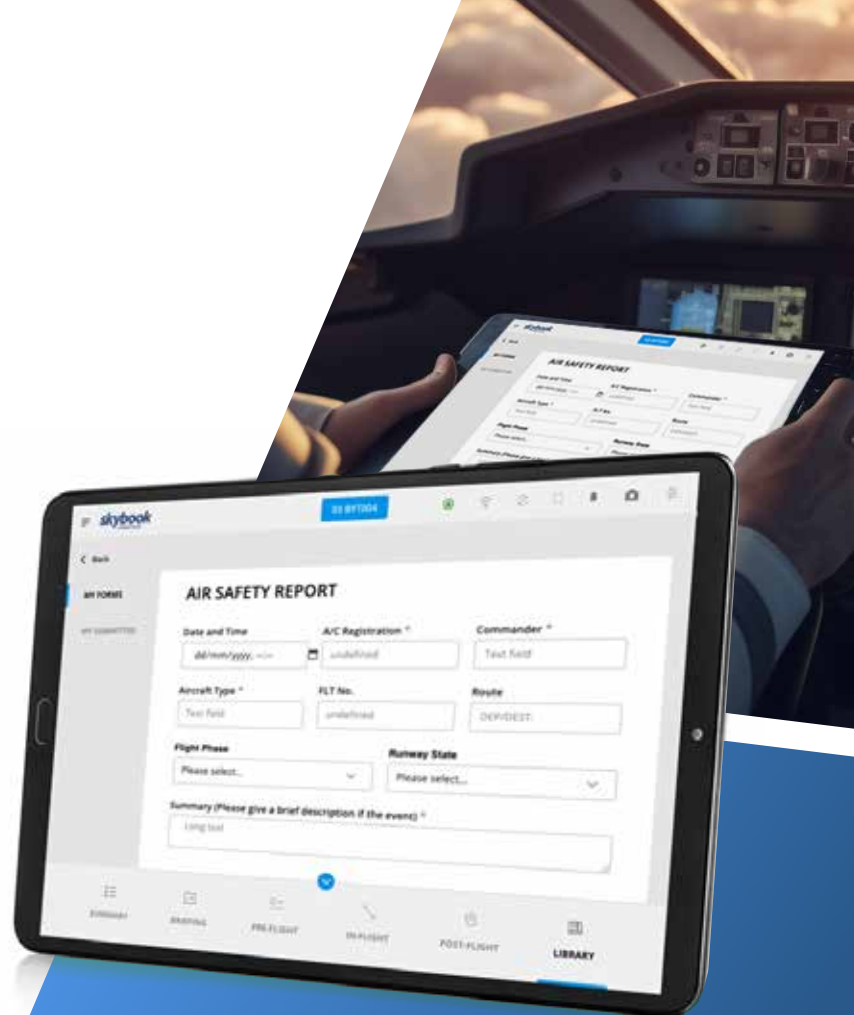

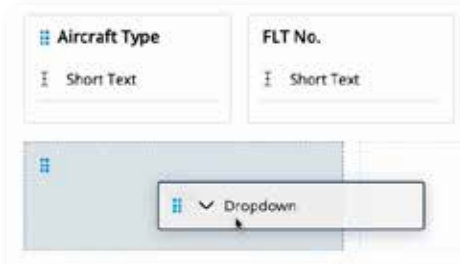

The screenshot shows the 'NOTAM' section of the skybook interface. It includes tabs for 'Exclusions', 'E-Mail Rules', and 'NOTAM Watch'. Below the tabs is an 'Add Subject' button and a drag-and-drop area for grouping columns. A table displays a list of NOTAMs with columns for QCode, Status, and Description.

| QCode | Status   | Description                  |
|-------|----------|------------------------------|
| AC    | CRITICAL | CTR                          |
| AFAF  | WARNING  | FIR FLT CHECKED AND OKAY     |
| FAHX  | CRITICAL | AERODROME BIRD CONCENTRATION |
| FALC  | CRITICAL | AERODROME CLOSED             |
| FATT  | WARNING  | AERODROME TRIGGER NOTAM      |

# Form Builder

**Bespoke forms for the flight crew to complete, improving communication.**

- Pilots access digital forms directly on the EFB app
- Reduce time delays in communication sharing
- Prepopulated information, requiring less input
- Form data saved in post-flight data storage

# Document Library

**Access aircraft specific documents on the EFB. Send to entire fleets, certain aircraft, or specific flights.**

- Quicker access to specific documents or manuals
- File management for all aircraft
- Annotate, highlight and bookmark pages
- Manage version control and audit trail
